Digital Pen & Paper Technology - the 'write' solution!

Instantly convert paper forms and handwritten information into electronic data without changing the way you work! Combine this with our web-based 'Info Tracker' information management software and you have an instant end-to-end solution improving the operational efficiency of your business.

The concept

If you are already using paper forms in your business they can be easily converted to digital pen format. Complete the form in the normal way using the digital pen - as you write or even draw sketches the pen 'records' the information electronically. This information can be transmitted instantly via a mobile phone link to our Info Tracker Information Management software. Alternatively you can upload the information via a docking station linked to a pc or laptop when you return to the office or home - it's that simple!

By combining digital pen technology with our data base software we have created an efficient, cost effective and seamless solution to capture, track and report your business information - a critical advantage in today's competitive market place.

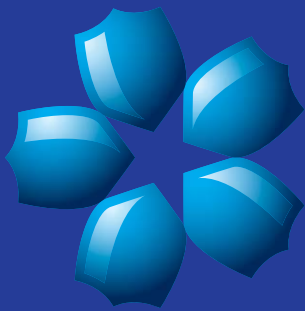

Key benefits

- Single step process - avoids re-keying data
- Improved productivity/efficiency
- Easy to use, robust and reliable
- Converts writing into text/data
- Immediate transmission from the 'field' to 'office'
- Seamless integration to our 'Info Tracker' database software
- Low cost, user friendly alternative to PDA's or Tablet PC's
- Can be used for any form and any process
- Does not change the way people work
- Rapid deployment

"We have revolutionised the way we record, track and report business information without changing the way our people work - paper to computer at the flick of a pen, brilliant!"
Marcus Brian,
Merlin Entertainments Group.

How does it work?

The technology uses a virtually invisible dot pattern overprinted on your paper forms. The digital pen includes a tiny camera that reads the dots as you write. Each pen can store up to 200 A4 pages of writing and the data can be transmitted via mobile phone or by docking it with a PC or laptop.

The system also captures and uploads an exact image of the completed form in pdf format. It also translates the writing to text / data which automatically populates our 'Info Tracker' web based data management solution creating an electronic record of the form that can be tracked and reported in the usual way.

Quick & easy deployment

Digital Pen & Paper solutions can be developed and deployed within a few weeks. Training requirements are low as form completion is a familiar process.

The pens are robust and the system works for all sizes of business with simple or complex implementations.

What can it be used for?

If your team need to record data then it is likely that a digital pen & paper system will provide a cost effective solution. Typical examples include....

- Occupational health forms
- Equipment service reports
- Witness statements
- Inspection / audits
- Risk assessment
- Waste transfer notes
- Surveys
- Accident & near miss
- Investigation
- Meeting notes
- Customer survey
- Safety checks

What next? - call us on 01926 844 200 or email info@info-exchange.com

We can arrange an on line demo or a one to one meeting to discuss how you can take advantage of Digital Pen and Info Tracker technology to improve your business performance.
